Ayush Shrestha

The 5 topics learnt from this project are:

① Express JS backend development:
→ Building a basic Rest based server
that uses get, put and delete
methods.
→ Using the body parser middleware
to extract http body as JSON.

② Prisma ORM:
→ Connect Prisma with Mongo DB
→ The mongodb collections documents
have a -id property as the
"primary key" to use it with
prisma need the @map operator
→ handle delete, create and
get operations

③ Front-end backend Integration:
→ Use the fetch function to
send get, post and get, delete and
put requests.
→ Handle asynchronous operations with
the .then and callback syntax.

4) Vanilla JavaScript State management.
→ Implementing a react like useState function which allows for predictable state updates

5) Vanilla DOM manipulation.
→ Use the browser native apis like getElementbyid appendchild etc to update the UI
